ENABLING INFORMED PLANNING & DECISION MAKING

PRELIMINARY INTELLIGENCE APPRAISAL SERVICES

What is a Preliminary Intelligence Appraisal (PIA)?

A PIA is long form written and visual product that highlights tangible conditions and considerations to enable informed planning and decision making.

How do we do it?

We collect and analyse intelligence on stakeholders, terrain, environmental and threat characteristics relevant to your areas of operations to inform your decision making.

What do we provide?

Consisting of four parts, the GRC PIA overlays relevant factors with one another to assist you to anticipate challenges, mitigate risk, exploit vulnerabilities, and identify opportunities for success.

Our PIA Products

Operational Landscape Assessment

An assessment of operational boundaries, physical, human, and informational aspects, geographic conditions and socio-political considerations.

Environmental Effects Analysis

An analysis of how the environment's physical characteristics will affect operations within your set area.

Threat Capabilities & Intentions Evaluation

An evaluation of the threats to your operation or business, through understanding the threat's capabilities, intentions, resources, and historical behaviour.

Scenario Development & Planning

Based on the analysis of all the above factors, GRC will overlay these to provide assessment on likely courses of action that threats may pursue.

1

Identify significant operational characteristics that will influence your planning.

2

Analyse geographic, demographic, and weather effects on stakeholders.

3

Be informed of threat intentions and capabilities to safeguard assets, infrastructure, and safety.

4

Anticipate potential challenges and create effective contingencies.

Alongside the four-part product, GRC Group's PIA also generate smaller, but no less crucial products such as:

- In-depth threat assessments
- Organisational analysis
- Stakeholder and network analysis
- Decision support templates
- Common Operating Pictures
- Centre of Gravity assessment
- Route and supply chain assessment
- Collection Plans

PIA is driven by multiple factors and some or all products may or may not be feasible for your use. However, GRC Group will ensure that the product you receive is tailored to your needs and provides you the intelligence you require to make informed planning and decisions.
